

# Inti Vidal González

+56 9 7317 26    inti.vidal@usm.cl    LinkedIn    github.com/RealPingu    Santiago, Chile

## EDUCATION

**UNIVERSIDAD TÉCNICA FEDERICO SANTA MARÍA (UTFSM), CHILE** 2019 – 2026

**Civil Engineering in Computer Science** – 5.5-year program, equivalent to B.Sc. + M.Sc.

- Solid foundation in Object-Oriented Programming (OOP), software architecture, distributed systems, operating systems, and algorithmic optimization.

## EXPERIENCE

**METERBEE SPA**

Viña del Mar, Chile

**Junior Software Engineer**

Oct 2025 – Jan 2026

- Engineered an operational management platform for real-time monitoring and data auditing, developing Python backend services using Frappe Framework alongside Jinja3 templates.
- Deployed production environments on Ubuntu Server via DigitalOcean Droplets, managing Linux systems via CLI and setting up automated GitLab CI/CD pipelines.
- Automated unstructured data ingestion via digital image processing and OCR, implementing Role-Based Access Control (RBAC) to ensure operational traceability and data integrity.

**EPROC SOLUCIONES DE SOFTWARE SPA**

Santiago, Chile

**Software Engineering Intern**

Jul 2024 – Aug 2024

- Architected and integrated third-party digital signature web services into the core enterprise platform by designing and consuming resilient RESTful APIs.
- Documented API integration endpoints and performed functional validation across distributed testing environments.

**METERBEE SPA**

Viña del Mar, Chile

**Software Engineering Intern**

Dec 2023 – Feb 2024

- Built a telemetry monitoring pipeline for industrial water pumps in mining operations, extracting time-series metrics from InfluxDB through Grafana APIs.
- Developed a Python application with a Tkinter interface to query visual panels and automate weekly executive reporting (.docx).
- Reduced administrative overhead from 5 hours to 15 minutes per user weekly through automated data extraction.

## PROJECTS

**REFRACTED SPEECH: AI SPEECH PATHOLOGY SCREENING** – Scrum Master

2023 – 2024

- Led Agile sprint planning and project delivery for a machine learning solution designed to evaluate dysarthria probability from voice samples recorded on mobile devices.
- Coordinated cross-functional workflows between acoustic data preprocessing, feature extraction pipelines, and classification model training.
- Ensured continuous integration across project deliverables, organizing technical milestones and facilitating communication across team roles.

**TRUCK-AND-DRONE DELIVERY OPTIMIZATION ( $k$ -MVDRP)**

2024

- Implemented heuristic search algorithms in C++ to solve a coordinated vehicle routing problem with multiple drones under dynamic flight constraints.
- Modeled battery consumption, payload limits, and multi-vehicle launch/recovery synchronization using Object-Oriented Programming and efficient data structures.

---

## TECHNICAL SKILLS

---

**Programming & Scripting** Python (OOP, Scripting, Automation), C++, Bash/Shell, JavaScript, TypeScript.

**DevOps, Systems & Cloud** Linux CLI (Ubuntu), GitLab CI/CD, DigitalOcean, Docker, AWS, GCP.

**Observability & Databases** InfluxDB (Time-series), Grafana, PostgreSQL, MongoDB, SQLite, RESTful APIs.

**Project Management & Practices** Agile/Scrum (Scrum Master), Object-Oriented Design (OOD), RBAC, Code Reviews.

**Languages** Spanish (Native), English (Advanced / B2+ professional working proficiency).
